# Chapter 1

## Hierarchical Index

### 1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Functions . . . . .	7
Hamiltonian . . . . .	9
Elliptical . . . . .	6
Spherical . . . . .	12
Particle . . . . .	10
RandomGenerator . . . . .	11
Solver . . . . .	11
ImportanceSampling . . . . .	9
Metropolis . . . . .	10
System . . . . .	12
Wavefunction . . . . .	15
AsymmetricGaussian . . . . .	5
Gaussian . . . . .	7

## Chapter 2

# Class Index

### 2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">AsymmetricGaussian</a>	5
<a href="#">Elliptical</a>	6
<a href="#">Functions</a>	7
<a href="#">Gaussian</a>	7
<a href="#">Hamiltonian</a>	9
<a href="#">ImportanceSampling</a>	9
<a href="#">Metropolis</a>	10
<a href="#">Particle</a>	10
<a href="#">RandomGenerator</a>	11
<a href="#">Solver</a>	11
<a href="#">Spherical</a>	12
<a href="#">System</a>	12
<a href="#">Wavefunction</a>	15

## Chapter 3

# Class Documentation

### 3.1 AsymmetricGaussian Class Reference

Inheritance diagram for AsymmetricGaussian:

#### Public Member Functions

- **AsymmetricGaussian** (class [System](#) \*s, double alpha, double beta, double a)
- double [evaluateAll](#) ()  
*Evaluates the wavefunction in the specified point.*
- double [evaluateSing](#) (int part\_idx)  
*Evaluates the gaussian contribution relative to the part\_idx-th particle.*
- double [analyticalAlphaDerivative](#) ()  
*evaluates the analytical derivative with respect to alpha*
- double [numericalSecondDerivative](#) (int part\_idx, int direction, double h)
- vector< double > [DriftForce](#) (int part\_idx)  
*evaluates the drift force associated to the part\_idx-th particle*

#### Additional Inherited Members

#### 3.1.1 Member Function Documentation

### 3.1.1.1 evaluateSing()

```
double AsymmetricGaussian::evaluateSing (
    int part_idx ) [virtual]
```

Evaluates the gaussian contribution relative to the part\_idx-th particle.

See also

[evaluateAll\(\)](#)

Implements [Wavefunction](#).

### 3.1.1.2 numericalSecondDerivative()

```
double AsymmetricGaussian::numericalSecondDerivative (
    int part_idx,
    int direction,
    double h ) [virtual]
```

Evaluates numerically the second derivative with respect to the coordinate "direction" of particle "part\_idx". The derivative is evaluated in the point in which the particles are in this moment. direction can be 0 (x), 1 (y), 2 (z), accordingly to the dimension of the system chosen.

Implements [Wavefunction](#).

The documentation for this class was generated from the following files:

- Wavefunctions/asymmetricGaussian.h
- Wavefunctions/asymmetricGaussian.cpp

## 3.2 Elliptical Class Reference

Inheritance diagram for Elliptical:

### Public Member Functions

- **Elliptical** (class [System](#) \*system, double omegaXY, double omegaZ)
- double **getOmegaXY** ()
- double **getOmegaZ** ()
- double **LocalEnergyAnalytic** ()
- double **LocalEnergyNumeric** (double h)

## Additional Inherited Members

The documentation for this class was generated from the following files:

- Hamiltonians/elliptical.h
- Hamiltonians/elliptical.cpp

## 3.3 Functions Class Reference

### Public Member Functions

- **Functions** (class [System](#) \*system)
- `vector< vector< double > > solve_varying_alpha` (double alpha\_min, double alpha\_max, int Nalphas)
- `double gradientDescent` (double inicialAlpha, double gamma, double tolerance, int Nmax, int Nsteps)

### Public Attributes

- class [System](#) \* **system**

The documentation for this class was generated from the following files:

- Others/functions.h
- Others/functions.cpp

## 3.4 Gaussian Class Reference

Inheritance diagram for Gaussian:

### Public Member Functions

- **Gaussian** (class [System](#) \*s, double alpha)
- `double evaluateAll` ()
- `double evaluateSing` (int part\_idx)  
*Evaluates the gaussian contribution relative to the part\_idx-th particle.*
- `double numericalSecondDerivative` (int part\_idx, int direction, double h)
- `double analyticalAlphaDerivative` ()  
*evaluates the analytical derivative with respect to alpha*
- `vector< double > DriftForce` (int part\_idx)  
*evaluates the drift force associated to the part\_idx-th particle*

## Additional Inherited Members

### 3.4.1 Member Function Documentation

#### 3.4.1.1 `evaluateAll()`

```
double Gaussian::evaluateAll ( ) [virtual]
```

See also

[Wavefunction::evaluateAll\(\)](#)

Implements [Wavefunction](#).

#### 3.4.1.2 `evaluateSing()`

```
double Gaussian::evaluateSing (
    int part_idx ) [virtual]
```

Evaluates the gaussian contribution relative to the `part_idx`-th particle.

See also

[evaluateAll\(\)](#)

Implements [Wavefunction](#).

#### 3.4.1.3 `numericalSecondDerivative()`

```
double Gaussian::numericalSecondDerivative (
    int part_idx,
    int direction,
    double h ) [virtual]
```

Evaluates numerically the second derivative with respect to the coordinate "direction" of particle "part\_idx". The derivative is evaluated in the point in which the particles are in this moment. direction can be 0 (x), 1 (y), 2 (z), accordingly to the dimension of the system chosen.

Implements [Wavefunction](#).

The documentation for this class was generated from the following files:

- Wavefunctions/gaussian.h
- Wavefunctions/gaussian.cpp

## 3.5 Hamiltonian Class Reference

Inheritance diagram for Hamiltonian:

### Public Member Functions

- **Hamiltonian** (class [System](#) \*system)
- virtual double **LocalEnergyAnalytic** ()=0
- virtual double **LocalEnergyNumeric** (double h)=0

### Public Attributes

- class [System](#) \* **system**

The documentation for this class was generated from the following files:

- Hamiltonians/hamiltonian.h
- Hamiltonians/hamiltonian.cpp

## 3.6 ImportanceSampling Class Reference

Inheritance diagram for ImportanceSampling:

### Public Member Functions

- **ImportanceSampling** (class [System](#) \*system, int Nsteps, double initialFraction, double dt, double D)
- double **getdt** ()
- double **getD** ()
- void **setdt** (double dt)
- void **setD** (double D)
- vector< double > **solve** (bool allAverages)
- vector< double > **solve** (double h)

## Additional Inherited Members

The documentation for this class was generated from the following files:

- Solvers/importanceSampling.h
- Solvers/importanceSampling.cpp

## 3.7 Metropolis Class Reference

Inheritance diagram for Metropolis:

## Public Member Functions

- **Metropolis** (class [System](#) \*system, int Nsteps, double initialFraction, double step)
- double **getStep** ()
- double **setStep** (double step)
- vector< double > **solve** (bool allAverages)
- vector< double > **solve** (double h)

## Additional Inherited Members

The documentation for this class was generated from the following files:

- Solvers/metropolis.h
- Solvers/metropolis.cpp

## 3.8 Particle Class Reference

## Public Member Functions

- **Particle** (class [System](#) \*system, double mass, vector< double > pos)
- void **setMass** (double m)
- void **setPosition** (vector< double > new\_pos)
- vector< double > **getPosition** ()
- double **getMass** ()
- void **move** (vector< double > delta\_pos)

## Public Attributes

- class `System` \* `system`

The documentation for this class was generated from the following files:

- Particles/particle.h
- Particles/particle.cpp

## 3.9 RandomGenerator Class Reference

### Public Attributes

- `uniform_real_distribution< double >` `uniform`
- `normal_distribution< double >` `normal`

The documentation for this class was generated from the following files:

- Others/random\_generator.h
- Others/random\_generator.cpp

## 3.10 Solver Class Reference

Inheritance diagram for Solver:

### Public Member Functions

- **Solver** (class `System` \*system, int Nsteps, double initialFraction)
- int **getNsteps** ()
- double **getInitialFraction** ()
- void **setNsteps** (int Nsteps)
- void **setInitialFraction** (double initialFraction)
- virtual vector< double > **solve** (bool allAverages)=0
- virtual vector< double > **solve** (double h)=0

### Public Attributes

- class `System` \* `system`

## Protected Attributes

- int **Nsteps**
- double **InitialFraction**

The documentation for this class was generated from the following files:

- Solvers/solver.h
- Solvers/solver.cpp

## 3.11 Spherical Class Reference

Inheritance diagram for Spherical:

## Public Member Functions

- **Spherical** (class [System](#) \*system, double omega)
- double **getOmega** ()
- double **LocalEnergyAnalytic** ()
- double **LocalEnergyNumeric** (double h)

## Additional Inherited Members

The documentation for this class was generated from the following files:

- Hamiltonians/spherical.h
- Hamiltonians/spherical.cpp

## 3.12 System Class Reference

## Public Member Functions

- **System** (int dim, int Npart)
- class [Hamiltonian](#) \* **getHamiltonian** ()
- class [Wavefunction](#) \* **getWavefunction** ()
- class [Solver](#) \* **getSolver** ()
- class [RandomGenerator](#) \* **getRandomGenerator** ()
- int **getDimension** ()
- int **getNParticles** ()
- vector< class [Particle](#) \* > **getParticles** ()

- bool [getUseMatrix](#) ()
- void **setHamiltonian** (class [Hamiltonian](#) \*hamiltonian)
- void **setSolver** (class [Solver](#) \*solver)
- void **setWavefunction** (class [Wavefunction](#) \*wavefunction)
- void **setRandomGenerator** (class [RandomGenerator](#) \*randomgenerator)
- void [setUseMatrix](#) (bool usematrix)
- void **addParticle** (double mass, vector< double > pos)
- double [r2](#) (double parameter)  
*Evaluates the squared distance of particles and sums.*
- double [r2](#) (vector< double > vect, double parameter)  
*Evaluates the sum of the square of the vector components.*
- double [cdot](#) (vector< double > v1, vector< double > v2)  
*Scalar product between vector 1 and vector 2.*
- void [EvaluateRelativeDistance](#) ()  
*Updates the relative\_distance matrix.*
- void [EvaluateRelativePosition](#) ()  
*Updates the relative position matrix.*
- void [EvaluateRelativePosition](#) (int idx)  
*Updates a special row of the relative position matrix.*
- void [EvaluateRelativeDistance](#) (int idx)  
*Updates a special row of the relative distance matrix.*

## Public Attributes

- vector< vector< vector< double > > > [relative\\_position](#)  
*NxN matrix of 3d vectors. The ij-th element is a 3D vector containing posi - posj.*
- vector< vector< double > > [relative\\_distance](#)  
*NxN matrix of doubles. The ij-th element is the distance between particle i and particle j.*

### 3.12.1 Member Function Documentation

#### 3.12.1.1 [EvaluateRelativeDistance](#)() [1/2]

```
void System::EvaluateRelativeDistance ( )
```

Updates the relative\_distance matrix.

See also

[relative\\_distance](#)

#### 3.12.1.2 EvaluateRelativeDistance() [2/2]

```
void System::EvaluateRelativeDistance (
    int idx )
```

Updates a special row of the relative distance matrix.

See also

[relative\\_distance](#)

#### 3.12.1.3 EvaluateRelativePosition() [1/2]

```
void System::EvaluateRelativePosition ( )
```

Updates the relative position matrix.

See also

[relative\\_position](#)

#### 3.12.1.4 EvaluateRelativePosition() [2/2]

```
void System::EvaluateRelativePosition (
    int idx )
```

Updates a special row of the relative position matrix.

See also

[relative\\_position](#)

#### 3.12.1.5 getUseMatrix()

```
bool System::getUseMatrix ( )
```

See also

[relative\\_position](#), [relative\\_distance](#)

### 3.12.1.6 setUseMatrix()

```
void System::setUseMatrix (
    bool usematrix )
```

See also

[relative\\_position](#), [relative\\_distance](#)

The documentation for this class was generated from the following files:

- System/system.h
- System/system.cpp

## 3.13 Wavefunction Class Reference

Inheritance diagram for Wavefunction:

### Public Member Functions

- **Wavefunction** (class [System](#) \*system, int nparams)
- virtual double [evaluateAll](#) ()=0  
*Evaluates the wavefunction in the specified point.*
- virtual double [evaluateSing](#) (int part\_idx)=0  
*Evaluates the gaussian contribution relative to the part\_idx-th particle.*
- virtual double [numericalSecondDerivative](#) (int part\_idx, int direction, double h)=0
- virtual vector< double > [DriftForce](#) (int part\_idx)=0  
*evaluates the drift force associated to the part\_idx-th particle*
- virtual double [analyticalAlphaDerivative](#) ()=0  
*evaluates the analytical derivative with respect to alpha*
- void **setParameter** (int idx, double value)
- double **getParameter** (int idx)

### Public Attributes

- class [System](#) \* **s**

### Protected Attributes

- int **nparams**
- vector< double > **params**

### 3.13.1 Member Function Documentation

#### 3.13.1.1 `evaluateSing()`

```
virtual double Wavefunction::evaluateSing (
    int part_idx ) [pure virtual]
```

Evaluates the gaussian contribution relative to the `part_idx`-th particle.

See also

[evaluateAll\(\)](#)

Implemented in [AsymmetricGaussian](#), and [Gaussian](#).

#### 3.13.1.2 `numericalSecondDerivative()`

```
virtual double Wavefunction::numericalSecondDerivative (
    int part_idx,
    int direction,
    double h ) [pure virtual]
```

Evaluates numerically the second derivative with respect to the coordinate "direction" of particle "part\_idx". The derivative is evaluated in the point in which the particles are in this moment. direction can be 0 (x), 1 (y), 2 (z), accordingly to the dimension of the system chosen.

Implemented in [AsymmetricGaussian](#), and [Gaussian](#).

The documentation for this class was generated from the following files:

- Wavefunctions/wavefunction.h
- Wavefunctions/wavefunction.cpp
